About

Logistics Operations Management is a specialised training programme designed to develop expertise in overseeing the movement, storage, and distribution of goods, services, and information within complex supply chains. This programme provides a comprehensive understanding of essential logistics functions, including transportation, inventory management, warehousing, procurement, and customer service. Additionally, it integrates modern technological advancements and sustainability principles to enhance operational efficiency. As a critical component of industries such as manufacturing, retail, e-commerce, and transportation, effective logistics management plays a pivotal role in optimising supply chain processes and ensuring seamless customer satisfaction.

Key Learning areas

- Transportation and Freight Management
- Warehouse and Inventory Management
- Procurement and Supply Chain Coordination
- Logistics Planning and Execution
- Customer Service and Order Fulfillment
- Documentation and Regulatory Compliance
- Data Management and Digital Tools in Logistics
- Cost Management and Financial Planning
- Sustainability and Green Logistics
- Safety and Risk Management
- Communication and Teamwork

Structure

30% Theoretical Learning – Classroom-based instruction at accredited training institutions

70% Practical Training – Hands-on industrial experience with leading companies in Malaysia
